

# Altus Roadmap Overview

The Altus team works continuously to bring new features into Altus to ensure customers are working with a market leading platform to elevate their work, project and portfolio management outcomes. The Altus roadmap is updated at least quarterly to give you an overview of upcoming developments to support your planning for, and expanded use of, the Altus platform.

## Roadmap Themes

Schedule unification	Altus' vision is to increase collaboration, manage risk and reduce effort by allowing project teams to work with the tools that best suit their type of project. Schedule unification initiatives expand this set of supported task and project tools, ensuring uniform functionality in Altus regardless of the information source.
Insights and decision support	Altus is committed to elevating decision making by providing increased visibility and access to up-to-date, accurate information. We want to ensure that organisations of every size and operational structure have access to actionable insights when and where they need them.
Internationalisation	As organisations become more globally distributed, so do project teams. Altus is focused on delivering a platform that allows team members to access their work, or manage projects, in any part of the world using the languages, date/time standards and currencies that are the most appropriate for them.
Usability and efficiency	We want everyone's experience with Altus to be as intuitive and delightful as possible. To achieve this, we constantly seek ways to make navigating Altus easy and natural for all users and to make every step of managing projects, programs and portfolios logical and streamlined.
Strategic portfolio management	Altus aims to give you the power and agility to optimise your projects, portfolios and programs of work to meet your strategic goals and track resources, budgets and outcomes against the organisational value delivered. We want to ensure you are focused on the right work to maximise the value created, while reducing risk and costly delays.

## Next release

The next General Availability release for Altus is scheduled for late April 2024. Altus clients will receive communication of the new features and updates to the platform prior to this release. Check the current [First Release](#) notes for details of what's coming.

## Feedback and support

Contact your Altus implementation partner if you would like to discuss any of the features/functions outlined on the roadmap or to provide suggestions about the features you would like to see. We seek constant feedback from customers and partners and your thoughts and ideas are important to us.

# Altus development roadmap as at April 2024\*
